- Manufacturing ?

MyCureAll Founders

MyCureAll was founded by Elaine Richer, RPh, CEO, and Jacques Nir, LCSW. They are both strong advocates to allow CBD and cannabis to be used to treat substance abuse disorder. We are on a mission to enable insurance companies to pay not only for cannabis but, more importantly, the right cannabis for the right patient.

They started MyCureAll, LLC, a health technology company in 2019 located in Fair Lawn, New Jersey and have built the MyCureAll app and CBD line of flower, tinctures, salves and lotions.

Our team of pharmacists, social workers, and substance abuse and mental health professionals bring pharmaceutical precision and extensive expertise to the field of medical cannabis and CBD.

Our goal is to enable patients and physicians to work hand-in-hand to achieve a natural solution to ailments such as pain, anxiety, nausea, fibromyalgia, substance abuse, and many other conditions.

After speaking extensively with both patients and physicians, we are all excited about the natural approach to symptom control with medical cannabis. Patients want to move away from opioids and towards a natural, safer, and effective symptom management solution. They have told us about life-changing results from medical cannabis whether used for substance abuse, Crohn's disease, anxiety, stress, PTSD, Insomnia, MS Multiple Sclerosis, IBS, or many other conditions.

Leadership Team

Elaine K. Richer, RPh. CEO and Co-Founder, MyCureAll LLC.

In my 20-plus years as a pharmacist, I have seen tens of thousands of patients for dozens of different conditions. As a pharmacist, I always strive to help patients, make their lives happier, healthier, and ease their burdens. Addiction is a tough illness and I feel honored to help patients on their road to recovery. At MyCureAll, we will optimize innovation to treat pain properly, while preventing addiction at its core, and ensure improved clinical outcomes. I want to make our society a better place, my goal is to decrease opioid overdoses, decrease deaths from suicides and overdoses, reunite families suffering due to drug addiction, and help patients achieve the most effective pain control.

Jacques Nir, LCSW COO and Co-Founder, MyCureAll, LLC

I graduated from Columbia University School of Social Work and am currently Director of a mental health clinic and adjunct professor at Columbia University School of Social Work. I have devoted my career to the public sector of social work and have worked with community-based programs for over 20 years. For the past 12 years I have been a Director of Substance Abuse outpatient programs and the redesigned OASAS (Office of Alcoholism and Substance Abuse Services) inpatient element treatment facilities. The evidence indicates and supports medicinal cannabis and CBD as a MAT (medication assisted treatment) protocol for both the OASAS and OMH (Office of Mental Health). Our program will save lives, increase compliance with recovery, and reduce Medicaid expenditures. CBD and medicinal cannabis, administered with continuing care, will prevent relapse from opiates and promote psychiatric treatment. These substances need to be covered by an individual's insurance policy. As the data proves, we will save lives and provide a safer, alternative form of medical treatment to reduce recidivism and redundant services.

Lifter: This strain produces oily “goldilocks” buds, perfect for the international trimmed hemp flower market. The flavor is sweet funk, with some hints of fuel—very sought after by consumers! Pound for pound, this is one of the best trimmed flowers available.

Special Sauce: This strain has exotic astringent berry smells, beautiful pistils, and some of the highest oil returns of any industrial hemp on the planet. This is a top-seller in the international trimmed flower market.

Sour Space Candy: This is a CBD-dominant plant that crosses Sour Tsunami with Early Resin Berry strains. This strain grows strong and has a mix of light and sour (Berry) flavor profile. Dense buds are multicolored, showing purple, orange, and green hues. With Sour Space Candy’s enticing terpene profile, this might be your new favorite CBD strain.

Hemp CBD is derived from the Cannabis Sativa L. plant. It impacts the psyche, often in beneficial ways and does not impair mental or physical function in most people. CBD can be considered psychoactive, but non-impairing. Many consumers are likely to feel relaxed, focused, and resilient to stress. A consumer does not need to be treating a medical condition in order to benefit from CBD.

Our CBD hemp flower is cultivated in rural California, Colorado, Oregon, North Carolina, Wisconsin and Illinois where commercial agriculture has thrived for decades. Our team of hemp farmers is dedicated to growing the finest, organic, smoke-able high-CBD hemp flowers for craft connoisseurs.
